REPORT

November 21, 2024

Sanmiwago Restaurant
64-66 7th Ave
New York, NY

ATT: Jeffrey

On Thursday, November 14, 2024, I performed a site visit and took attended noise measurements inside Apartments 2A, 2B and 2C, in order to determine whether any noise generated by the first floor restaurant will meet the requirements of the NYC Noise Code.

PROCEDURE:

Instruments used for the attended measurements were Nti XL2 Type 1 acoustic analyzer, and Bruel & Kjaer Type 4231 acoustic calibrator. As per standard practice, the instrument was checked just prior to measurements and again just after to ensure stability.

Average ambient measurements - 39dB(A).

I brought my own sound source in order to generate a higher than normal sound level that a small restaurant might produce. I set the test levels around 85dB(A), which would also test the ceiling transmission loss (TL).

The NYC Noise Code reads, in part...

Sect.24-231 Commercial music. *(a) No person shall make or cause or permit to be made or caused any music originating from or in connection with the operation of any commercial establishment or enterprise when the level of sound attributable to such music, as measured inside any receiving property dwelling unit:*

- (1) is in excess of 42 dB(A) as measured with a sound level meter; or*
- (2) is in excess of 45 dB in any one-third octave band having a center frequency between 63 hertz and 500 hertz (ANSI bands numbers 18 through 27, inclusive), in accordance with American National Standards Institute standard S1.6-1984; or*
- (3) causes a 6 dB(C) or more increase in the total sound level above the ambient sound level as measured in decibels in the "C" weighting network provided that the ambient sound level is in excess of 62 dB(C).*

RESULTS:

The instrument I used is capable of simultaneously showing A-weighted (sect.24-231 (1), as well as 1/3 octave bands showing flat or C-weighted levels (sect.24-231,(2) & (3).

The A-weighting filters out the low frequencies, a measurement that accounts for how the human ear **perceives** the loudness of a sound

The flat or C-weighted scale is a frequency weighting method that measures the **effect** of low-frequency sounds on the human ear.

1 st floor sound source	85 dB(A)
Apt. 2A (living room)	37 dB(A)
Apt. 2B (bedroom)	41 dB(A)
Apt. 2C	41 dB(A)

Frequencies - Hz	63	80	100	125	160	200	250	315	400	500
Apt. 2A (dB)	44	40	39	36	32	32	32	31	26	26
Apt. 2B (dB)	44	36	40	41	36	38	35	32	31	32
Apt. 2C (dB)	45	41	39	44	43	39	37	33	31	34

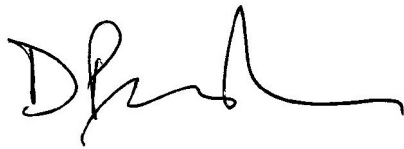

CONCLUSION:

Throughout the test period, there was no audible music heard coming from the restaurant below. This was captured in the simultaneous digital recordings of the sound level meter.

Based on the information gathered from this sound test, I can certify that the above restaurant, at 64 – 66 7th Ave, NYC is in compliance with all sections of the NYC Noise Code.

If you have any questions or need further information, please feel free to call me anytime.

Sincerely,

Dan Prosseda
